The *Immunization coverage report, state of Utah: 2022*, supports the mission and goal of state and local immunization programs which is: "... to improve the health of Utah citizens through vaccination to reduce illness, disability, and death from vaccine-preventable infections."

This annual *Immunization coverage report* provides an overview of immunization information about Utah residents, organized by immunization coverage status for Utah children, adolescents, and adults. The report presents data obtained from 4 primary sources: the National Immunization Survey (NIS), the Behavioral Risk Factor Surveillance System (BRFSS), the Utah Statewide Immunization Information System (USIIS), and an online survey administered through the research electronic data capture (REDCap) system for tracking immunization coverage rates in Utah schools, licensed daycare facilities, and long-term care facilities. Because of the differences in the collection methodologies of these data sources, care should be taken before considering comparisons.

Despite improvements in coverage rates in recent years, there is still much work to be done to achieve the Healthy People 2030 goal of preventing infectious diseases through increasing vaccination rates. The focus of the Utah Department of Health and Human Services Immunization Program continues to be those areas, groups, and communities where immunization interventions can be concentrated to make significant improvements to immunization coverage levels.

Continuing efforts to increase childhood immunization levels include a variety of interventions, such as ensuring healthcare providers have current information on immunization best practices. The Utah Immunization Program maintains collaborations with school nursing staff, local healthcare providers, health systems, school districts, childcare licensing facilities, and local health districts. These combined efforts will help ensure Utah children are protected from vaccine-preventable diseases now and into the future.

This report can be a resource for local immunization programs to evaluate coverage areas, identify gaps in services, develop immunization intervention strategies, and consider further investigations.

We value your opinion and welcome your feedback about this report.

The 29 counties in Utah are divided between 13 local health districts (LHDs) which are used in this report as the geographic boundaries of reporting service areas (see the map of Utah below). Statewide and national information is presented for comparison.

Although limited comments may follow a specific graph or chart, more detailed notes may be found in the References section, page 168. Explanatory footnotes are provided on some pages and are intended to supply information pertaining to data sources and limitations on data interpretation.

Early childhood immunization

The Advisory Committee on Immunization Practices (ACIP) and the Centers for Disease Control and Prevention (CDC) establish standards of comparison for immunization status. Up-to-date (UTD) at age 2 is the percentage of children 24 months of age who received all doses of recommended vaccines. This standard is used across the U.S. by state immunization programs and provider sites to evaluate their effectiveness in protecting children from vaccine-preventable diseases.

Child and adult immunization

Exposure to groups of people of any age increases the risks for contracting and transmitting infectious diseases. More than two-thirds of children younger than 6 years and nearly all older children spend significant time in childcare and school settings outside the home. The Utah Immunization Rule for Students (R396-100) became effective in 1975 to implement consistent requirements to protect children attending school.

School entry (Kindergarten and 7th Grade) and Two Doses of MMR (K-12)

Required kindergarten school entry immunizations include: DTaP, polio, MMR, hepatitis B, hepatitis A, and varicella vaccines.

Required 7th grade school entry immunizations include: hepatitis B, varicella, Tdap, and meningococcal vaccines.

Influenza and pneumococcal

The incidence of childhood vaccine-preventable diseases has declined dramatically, but similar successes among adults have not been achieved. Adults still suffer most from certain vaccine-preventable diseases in the U.S.

The 2021 Behavioral Risk Factor Surveillance System (BRFSS) survey results on influenza and pneumococcal immunization data are included in this report. These data provide a summary of the coverage of influenza and pneumococcal vaccinations for adults 18 years of age and older.

Appendix B includes 2021 immunization information for residents of long-term care and assisted living facilities. This data is collected by the Utah Department of Health and Human Services Immunization Program through an annual REDcap survey.

National Immunization Survey (NIS)

The NIS is sponsored by the National Center for Immunizations and Respiratory Diseases (NCIRD) and conducted jointly by NCIRD and the National Center for Health Statistics (NCHS) at the CDC. The NIS is a random-digit-dialing telephone survey of parents followed by a mailed survey to children's immunization providers. The survey requests immunization information from the providers. The results are tabulated and presented by the CDC. The NIS assesses vaccination levels of young children (ages 19–35 months), teens (ages 13–17 years) and, for flu only, children (ages 6–18 months and ages 3–12 years). Further descriptions of the NIS surveys can be found here: <https://www.cdc.gov/vaccines/imz-managers/nis/about.html>.

Behavioral Risk Factor Surveillance System (BRFSS)

The Utah BRFSS is an ongoing information collection effort by the Utah Department of Health and Human Services (DHHS) in conjunction with the CDC to assess the prevalence of and trends in health-related behaviors in the noninstitutionalized Utah adult population ages 18 years and older. The BRFSS survey is conducted by DHHS employees who contact Utahns by landline and cell phones and use a scripted questionnaire to conduct interviews and collect responses. The CDC then aggregates annual results. In 2021, 1,746 interviews were conducted by landline phones and 8,875 interviews were conducted by cell phones.

REDCap web database and survey tool

Research electronic data capture (REDCap) is a secure web online survey and database platform used to track immunization coverage rates for Utah schools, Head Start programs, licensed daycare facilities, and long-term care facilities. The Utah Department of Health and Human Services Immunization Program staff access the online database to track data and run reports required by state rules. Users at schools, Head Start programs, daycare facilities, and long-term care facilities access the secure web survey to enter immunization data for their facilities.

Utah Statewide Immunization Information System (USIIS)

Established in 1998, USIIS collects, consolidates, and manages immunization records for Utah residents of all ages. The primary sources of USIIS data are healthcare providers, including public clinics, private clinics and practices, hospitals, and pharmacies (see table on the next page). Additionally, USIIS contains birth certificate data from the DHHS Office of Vital Records and Statistics. Participation in USIIS is voluntary; not all providers of immunizations participate. However, participation from all Vaccines for Children (VFC) providers is required. See page 129 for more details about the VFC program.

For the 2022 Immunization Coverage Report, USIIS records were grouped into 13 local health district service areas by their most up-to-date ZIP code and county information. Coverage results reflect 2021–2022 data submitted to USIIS as of July 1, 2022. Child coverage results include approximately 90% of Utah children—persons 18 years of age and younger with at least 1 immunization. Adult immunization coverage estimates include approximately 70–90% of Utah adults—persons age 19 and older with at least 1 immunization. Although USIIS data provides helpful vaccination estimates, it is not a comprehensive archive of all vaccinations administered in the state and should be interpreted with caution.

Count of enrolled USIIS provider facilities, 2021 and 2022		
	2021	2022
Charter schools	134	133
District schools	720	729
Private schools	68	74
School districts	44	46

Acronyms and abbreviations

ACIP—Advisory Committee on Immunization Practices
BRFSS—Behavioral Risk Factor Surveillance System
CDC—Centers for Disease Control and Prevention
CHC—Community health center
CI—Confidence interval
DTaP—Diphtheria, tetanus toxoids, and acellular pertussis vaccine
FQHC—Federally qualified health center
Hep A—Hepatitis A vaccine
Hep B—Hepatitis B vaccine
HHS—U.S. Health and Human Services
Hib—Haemophilus influenza type B
HPV—Human papillomavirus
IQIP—Immunization quality improvement program
LHD—Local health district
MenACWY—Meningococcal conjugate vaccine
MenB—Meningococcal B vaccine
MMR—Measles, mumps, rubella vaccine
NIS—National Immunization Survey
PCV—Pneumococcal conjugate vaccine
PPSV—Pneumococcal polysaccharide vaccine
REDCap—Research electronic data capture online survey and database platform
RHC—Rural health center
Tdap—Tetanus, diphtheria, and pertussis vaccine
DHHS—Utah Department of Health and Human Services
USIIS—Utah Statewide Immunization Information System
UTD—Up to date
VFC—Vaccines for Children Program
WIC—Women, Infant, and Children Program

4:3:1 = 4 DTaP, 3 polio, 1 MMR
4:3:1:3 = 4 DTaP, 3 polio, 1 MMR, 3 Hib
4:3:1:4 = 4 DTaP, 3 polio, 1 MMR, 4 PCV
4:3:1:3:3 = 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 Hep B
4:3:1:0:3:1 = 4 DTaP, 3 polio, 1 MMR, 0 Hib, 3 Hep B, 1 varicella
4:3:1:3:3:1 = 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 Hep B, 1 varicella
4:3:1:4:3:1 = 4 DTaP, 3 polio, 1 MMR, 4 Hib, 3 HepB, 1 varicella
4:3:1:0:3:1:4 = 4 DTaP, 3 polio, 1 MMR, 0 Hib, 3 HepB, 1 varicella
4:3:1:3:3:1:4 = 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 Hep B, 1 varicella, 4 PCV

The National Immunization Survey (NIS)-Child Survey was first launched in 1994. The target population for the NIS-Child is children who live in the U.S., and are or will be 19–35 months old within a few weeks of being selected to participate in the survey. The NIS is a random-digit-dialed survey of parents or guardians and includes data for more than 15,000 children annually. The telephone survey is followed by a questionnaire mailed to vaccination providers to obtain the child's vaccination history. Data are used to monitor vaccination coverage among 2-year-old children at the national, state, and selected local levels, and some in U.S. territories.

NIS-Child measures were previously reported as an estimate of vaccine coverage for children age 19–35 months in each survey year. Beginning with data reported in 2019 for survey years 2016–2018, NIS-Child data is now reported for children age 24 months per birth year (e.g., 24-month-old children born in 2019 had data collected in the 2021 survey year). Due to this change, NIS-Child data reported here is not directly comparable to similar data in previous Immunization coverage reports produced by the DHHS.

Estimated vaccination coverage among children age 24 months									
U.S., by birth year					Utah, by birth year				National rank
	2018		2019		2018		2019		Birth year

4:3:1:3:3:1:4 ^{ss}	74.6	(66.2–82.3)	71.1

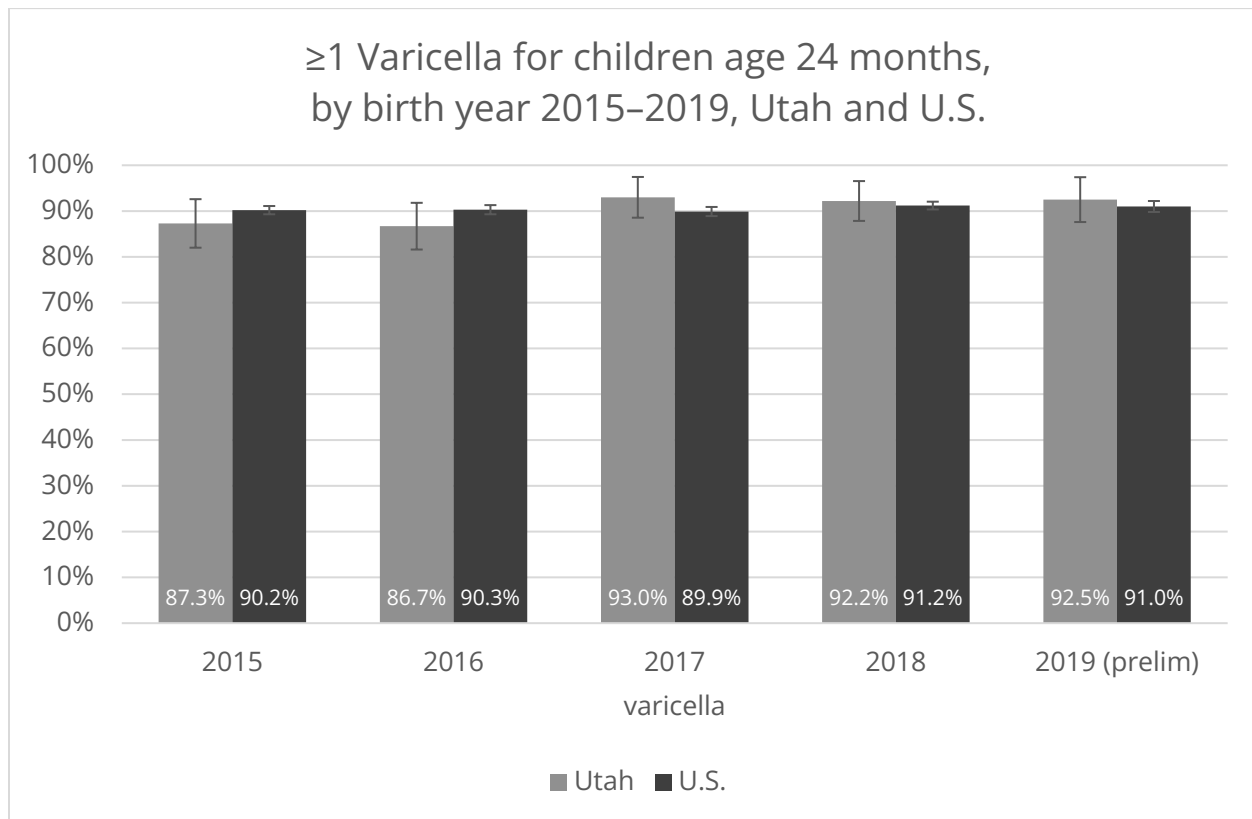

^s One dose Hep B administered from birth through age 3 days.

^{ss} 4+ DTaP, 3+ polio, 1+ MMR, 3 or 4 doses Hib, depending on vaccine type, 3+ Hep B, 1+ varicella, and 4+ PCV.

* HHS Region 8 consists of Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

Immunization status by school type, 2021/22 school year		
Facility type	Adequately immunized (%)	Total exemptions (%)
Childcare facilities and preschools	89.2	4.3
Head start centers	93.3	3.4
Kindergarten (online)	56.5	37.4
Kindergarten (in person or hybrid)	89.2	5.9
District schools	89.4	5.2
Charter schools	88.1	9.5
Private schools	88.2	5.8
7th grade (online)	57.4	35.5
7th grade (in person or hybrid)	88.9	6.3
District schools	89.5	5.5
Charter schools	84.4	12.4
Private schools	85.3	8.5
Second-dose MMR, K-12 (online)	73.1	25.3
Second-dose MMR, K-12 (in person or hybrid)	94.7	4.1
District schools	95.3	3.6
Charter schools	91.2	8.3
Private schools	91.8	3.9

Since 2007, the CDC has published annual NIS data for teen populations. This survey is similar to the childhood NIS. Survey responses are collected via telephone through random-digit dialing. Those who participated were asked to provide healthcare provider information so their verbal responses over the phone could be validated through the official immunization record. Children ages 13–17 years were included in the study. Participants were asked about receiving meningococcal conjugate (MenACWY), MMR, Hepatitis B, varicella, Tdap, and HPV vaccines. The CDC identified 3 limitations to this survey: 1) there could be bias due to nonresponse and households without landline telephones; 2) underestimation of vaccine coverage may have occurred due to the exclusive use of provider-verified records; and, 3) some state level and race/ethnicity level data should be interpreted with caution because of small sample sizes. Results from this survey have been reported on national and state levels, which can be seen in the tables below.

Estimated vaccination coverage among ages 13–17, 2017–2021						
	≥1 dose varicella		≥1 dose Tdap		≥1 dose MenACWY	
	Utah %	U.S. %	Utah %	U.S. %	Utah %	U.S. %

* HPV UTD - Includes those with ≥3 doses, and those with 2 doses when the first HPV vaccine dose was initiated at age <15 years, and there was at least 5 months minus 4 days between the first and second dose.

The following estimates of adult immunization levels for pneumococcal, influenza, shingles/zoster, and tetanus vaccine are collected via the Behavioral Risk Factor Surveillance Survey (BRFSS).

Estimates of adult immunization rates with shingles/zoster vaccine and tetanus vaccine are collected by the BRFSS on a rotating basis every 3 years. Questions about shingles/zoster vaccination were included in the survey for years 2014, 2017, and 2020. Questions about tetanus vaccination were included in the survey for years 2013, 2016, and 2019. The most recent data for each measure is presented in the graphs below.

COVID-19 vaccines became available in late 2020 and were widely adopted in Utah throughout 2021 as various age groups became eligible for vaccination. Below are measures for the number of individuals and percentage of the population in each vaccine eligible age group and LHD with complete vaccination series and 1 + booster vaccines as of July 1, 2022. DHHS maintains a comprehensive dashboard of several up-to-date COVID-19 immunization measures. For information about current COVID-19 vaccination in Utah visit the vaccines tab on this dashboard coronavirus.utah.gov/case-counts/.

** Zoster vaccination only available to adults age 50+. This measure reports only the percentage of adults age 50+ who are vaccinated with the zoster vaccine.

*** PPSV23 vaccination only recommended for adults age 65+. This measure reports only the percentage of adults age 65+ who are vaccinated with PPSV23.

The Immunization Quality Improvement Program (IQIP) is a program designed to provide quality improvement activities for Vaccines for Children (VFC) providers. The purpose of IQIP is to promote and support provider-level quality improvement efforts designed to increase on-time vaccination of children and adolescents in adherence to the Advisory Committee on Immunization Practices (ACIP) routine immunization schedule.

IQIP core strategies

1. Schedule the next visit before the patient leaves the provider office.
2. Leverage the Utah Statewide Immunization Information System's (USIIS) functionality to improve immunization practice.
3. Give a strong vaccine recommendation, specifically for HPV vaccine, if the provider serves adolescents.
4. Strengthen vaccination communications.

IQIP process

Site visit (in-person)

- Discuss provider's vaccination workflow
- Review initial coverage assessments and set coverage goals
- Discuss, select, and practice QI strategies

2-Month check-in (phone call)

- Monitor progress
- Provide technical assistance and motivation
- Update strategy implementation plan

6-Month check-in (phone call)

- Monitor progress
- Provide technical assistance and motivation
- Update strategy implementation plan

12-Month follow-up (phone call)

- Assess QI progress and provide technical assistance
- Evaluate year-over-year change in coverage levels
- Update strategy implementation plan and encourage continued effort

During the IQIP process, each provider decides on a Strategic implementation plan with the IQIP representative. The representative then follows-up at 2 months, 6 months, and then re-runs the assessment rates and reviews the progress at 12 months after the initial site visit.

In-person initial IQIP visits resumed for 2021. The goal is to initiate the IQIP process with 25% of our providers. We were able to complete initial visits in 79 provider offices, reaching our goal of 25%. These visits are followed up on throughout the entire 12-month cycle.

Immunization report for long-term care facilities

Long-term care facilities are required to report the influenza and pneumococcal immunization status of patients and the influenza and hepatitis B immunization status of employees to the Utah Department of Health and Human Services Immunization Program. Completion of the annual report is necessary to prevent sanctions of a facility's license.

The report includes persons who are residents or employees of a facility between October 1 and December 31 of the survey year. The survey is completed online no later than January 31 of the following year. Reporting facilities include hospitals (swing beds and transitional care beds), nursing care facilities, small healthcare facilities, and type I and type II assisted living facilities. There were 364 licensed facilities in 2021; 8 facilities did not report for the year 2021.

The portion of the survey reported is as follows:

- Influenza (flu) immunizations: given during the reporting time period for residents and employees;
- Pneumococcal immunizations: given at any time for residents only; and
- Hepatitis B immunizations: given at any time to an employee who has direct patient contact.

Vaccine-preventable diseases in Utah, 2021

Trends in vaccine-preventable diseases (VPDs) are tracked with the intent that the data can be helpful in the development of collaborative immunization campaign efforts. The following data were provided by the Office of Communicable Disease, Utah Department of Health and Human Services, for statewide and local health district VPD rates.

2021 Rates of vaccine-preventable disease (per 100,000)

	Haemophilus influenzae Type B	Hepatitis A virus	Hepatitis B virus, acute	Measles	Meningococcal disease	Mumps

Vaccines for children program report, 2021

The Vaccines for Children (VFC) program helps provide vaccines to children whose parents or guardians may not be able to afford immunizations. This helps ensure all children have a better chance of getting their recommended vaccinations on schedule. A child is eligible for the VFC Program if they are younger than 19 years of age and fall into 1 of the following categories:

- Medicaid-eligible
- Uninsured
- Underinsured
- American Indian or Alaska Native

The CDC estimates vaccination of children born between 1994 and 2018 will¹:

- Prevent 419 million illnesses
- Help avoid 936,000 deaths
- Save nearly \$1.9 trillion in total societal costs

In the 2023 fiscal year, it is estimated 385,390 children younger than 19 years old are eligible for VFC-funded vaccines in Utah.

VFC vaccines can be administered by any enrolled VFC program provider. Altogether there are more than 44,000 providers enrolled in the VFC Program nationwide².

³ Centers for Disease Control and Prevention (CDC) Vaccine Tracking System (VtrckS) System. Accessed October 2022.CDC.

Utah K-12 schools report the immunization status of all enrolled students via the REDcap online survey each year. From these reports, summaries are generated for kindergarten and 7th grade immunization status. The tables below report the percentage of students in kindergarten and 7th grade schools who are adequately immunized, who have an exemption to any school-required vaccine, who are enrolled via conditional enrollment or extended conditional enrollment, or are out of compliance with vaccination requirements. The 2021–2022 school year was the first reporting year which used the new REDcap online survey system. Given the newness of this collection system, the data presented here is subject to minor revisions and additions as DHHS works with schools to correct any errors or deficiencies identified.
